

RingLock®

Available in capacities from 120 ml to 520 ml - all round, and of course, inclusive of RingLock Tamper Evidence and in mould labelling and offset options.

Key benefits

- tamper evident
- 100% liquid tight seal
- easy-to-open, snap-on lid
- high quality offset or IML decoration
- withstands hot filling to 90° C and blast-freezing
- same lid fits several volumes
- microwave, dishwasher and freezer safe
- monomaterial construction for easy recycling

Locks in freshness; locks out tampering

RingLock incorporates the features that are important to today's consumer. Tamper Evidence is standard, providing a visible deterrent to tampering and giving your customers peace of mind. Microwave users will appreciate how RingLock retains its form during heating, and how the collar stays cooler than the body to prevent burns when handling. And when consumers dispose of the pot the monomaterial RingLock is easily recyclable.

Tough enough for hot filling and blast-freezing

The design of RingLock permits both hot filling to 90° C and blast-freezing. A protective collar ensures that the lid remains in place during transport and the top section retains its form when hot filling. The 100% liquid tight seal also eliminates the need for membrane seals.

Differentiate your product with decoration

High quality, up to 8-colour dry offset printing and photographic quality In-Mould Labelling (IML) allow you to differentiate your product and give it a premium identity.
